Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 2 – Technical Presentation

Course Code:	DSA03	Course Title:	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	Assessment:	Assessment Tool 2 – Technical Presentation
Weightage:	30% of CIA		
CO1 Statement:	Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3)		
Student Name:	V.Pavan Kumar Reddy	Reg. No.:	192472109
Section / Batch:	CSE AI	Date:	

Code of Conduct

I V.Pavan Kumar Reddy (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: V.Pavan Kumar Reddy

Instructions

- Suggested Team Member Roles (3 Members)
- Member 1: Theory, Concepts, and Literature Review
- Member 2: Algorithm Design, Models, and Technical Analysis
- Member 3: Demonstration, Case Study, Applications, and Conclusion
- GPS photo must submit.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	NLP Models, Language Processing Evolution	TP-01
Comparative Study of NLP Models and Algorithms	Model Analysis, Algorithm Comparison	TP-02
Regular Expressions for Real-World Text Processing	Pattern Matching, Information Extraction	TP-03
Designing Efficient Regular Expression Patterns for Information Extraction	Text Mining, Data Extraction Techniques	TP-04
Finite State Automata in Natural Language Processing	State Transitions, Language Recognition	TP-05
Building a Finite State Automaton for Token Recognition	Lexical Analysis, Token Validation	TP-06
Morphology and Word Formation in Natural Languages	Morpheme Analysis, Word Structure Processing	TP-07
Inflectional Morphology: Understanding Grammatical Variations	Grammatical Analysis, Word Normalization	TP-08
Derivational Morphology and Vocabulary Expansion	Word Generation, Semantic Transformation	TP-09
Comparative Analysis of Inflectional and Derivational Morphology	Morphological Classification, Language Analysis	TP-10

Finite-State Morphological Parsing Techniques	Morphological Parsing, Finite-State Processing	TP-11
Morphological Analysis for Indian Languages	Language-Specific Morphology, NLP Challenges	TP-12
Porter Stemmer: Design, Working Mechanism, and Applications	Stemming Algorithms, Text Preprocessing	TP-13
Stemming vs Morphological Parsing: A Comparative Study	Word Reduction, Morphological Processing	TP-14
Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	End-to-End Language Processing Pipeline	TP-15

Annexure A – Technical Presentation

Team No.	Technical Presentation Title	Description
1	Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	Analyze the historical development of NLP models, key milestones, and how language processing has evolved from handcrafted rules to intelligent systems.
2	Comparative Study of NLP Models and Algorithms	Explore different NLP models and algorithms used for language processing, comparing their working principles, strengths, and limitations.
3	Regular Expressions for Real-World Text Processing	Demonstrate how regular expressions are used for data validation, text extraction, log analysis, and information retrieval in practical applications.
4	Designing Efficient Regular Expression Patterns for Information Extraction	Analyze complex regular expression patterns used to extract emails, phone numbers, URLs, dates, and structured information from unstructured text.
5	Finite State Automata in Natural Language Processing	Explain the concepts of deterministic and non-deterministic finite automata and their role in lexical analysis and language recognition.
6	Building a Finite State Automaton for Token Recognition	Design and demonstrate a finite state automaton that recognizes tokens such as identifiers, keywords, and numbers in textual data.
7	Morphology and Word Formation in Natural Languages	Investigate how words are structured and formed using morphemes, and analyze the importance of morphology in NLP systems.
8	Inflectional Morphology: Understanding Grammatical Variations	Examine how inflectional changes affect word forms based on tense, number, gender, and case across different languages.
9	Derivational Morphology and Vocabulary Expansion	Analyze derivational processes that create new words and study their impact on semantic interpretation and language understanding.
10	Comparative Analysis of Inflectional and Derivational Morphology	Compare the characteristics, applications, and challenges of inflectional and derivational morphology in NLP tasks.
11	Finite-State Morphological Parsing Techniques	Explore finite-state transducers and parsing techniques used to analyze and generate morphological structures in natural languages.
12	Morphological Analysis for Indian Languages	Study the challenges and solutions involved in performing morphological processing for morphologically rich Indian languages such as Tamil, Hindi, and Telugu.
13	Porter Stemmer: Design, Working Mechanism, and Applications	Analyze the Porter Stemming algorithm, its rule-based approach, implementation steps, and role in information retrieval systems.
14	Stemming vs Morphological Parsing: A Comparative Study	Compare stemming and morphological parsing techniques based on accuracy, computational complexity, and application scenarios.
15	Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	Demonstrate a complete NLP preprocessing pipeline incorporating regular expressions, finite state automata, stemming, and morphological analysis for text processing.

Rubrics for Calculation

Technical Presentation					
Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Technical Content Accuracy	30	Highly accurate, in-depth, and insightful technical explanation	Technically correct content with adequate depth and clarity	Basic concepts presented with limited accuracy and depth	Content contains major technical errors; concepts poorly understood
Problem Identification	25	Problem rigorously analyzed using appropriate and advanced methods	Problem clearly defined with a logical engineering approach	Problem identified but analysis or methodology is weak	Problem statement unclear or incorrect; no logical approach
Use of Tools	20	Advanced tools, well-analyzed data, and highly effective visuals	Appropriate tools and data used effectively with clear visuals	Limited use of tools and basic data interpretation	Minimal or incorrect use of tools and data; poor visuals
Communication	15	Highly engaging, confident, and audience-focused delivery	Clear, organized, and professional communication	Understandable but lacks clarity, structure, or confidence	Poor organization, unclear speech, ineffective slides
Professionalism	10	Exemplary professionalism, leadership, and ethical awareness	Professional conduct with effective team collaboration	Basic professionalism; uneven team participation	Lacks professionalism; minimal contribution or ethical awareness

Team No. / Criteria Level	Technical Content Accuracy	Problem Identification	Use of Tools	Communication	Professionalism	Total %
8	30	25	20	12	7	94

PRAGMATIC ANALYSIS IN NLP

Teaching machines to interpret intended meaning — not just parsed words —
the final stage of the natural language processing pipeline

What Is Pragmatic Analysis?

The stage of NLP where a system moves beyond dictionary meaning and grammar to interpret what a speaker actually intends — using real-world knowledge, situational context, and prior discourse.

THE NLP PIPELINE

EXAMPLE

"It's freezing in here."

Semantic analysis stops at a literal temperature statement. Pragmatic analysis uses context (an open window, a shivering speaker) to infer the real intent: a request to close the window.

What Pragmatic Analysis Resolves

Four problems a pragmatic module handles that earlier NLP stages cannot

Speech Act / Intent

Classifying what an utterance does — a request, a warning, a question — for intent detection in chatbots and voice assistants.

"Can you send the report?" → request, not a yes/no question

Reference Resolution

Grounding pronouns and context-bound words to the correct real-world entity using situational context.

"Put it on the table" → resolving "it" from prior context

Implicature & Sarcasm

Inferring meaning beyond literal words, including sarcasm, understatement, and indirect answers.

"Great, another Monday" → negative sentiment, not enthusiasm

World Knowledge

Applying background/common-sense knowledge that isn't stated in the text itself to disambiguate meaning.

"The trophy didn't fit the suitcase, it was too big" → "it" = trophy

Worked Example: Chatbot Query

Tracing an utterance through the pragmatic-analysis stage

INPUT

"Do you know what time it closes?"

CONTEXT USED

Prior turn: user asked about a nearby café. Dialogue history + world knowledge (cafés have closing times) are pulled in.

PRAGMATIC INFERENCE

Literal form is a yes/no question, but the intent is a request for the closing time itself.

SYSTEM OUTPUT

"It closes at 9 PM." (not a bare "Yes.")

Where This Matters

- Conversational AI & voice assistants — resolving indirect requests
- Machine translation — preserving intent across languages
- Sentiment analysis — catching sarcasm and irony
- Question answering — matching intent to informative answers

Takeaway: pragmatic analysis is what lets an NLP system respond to what a user means — not just what they literally typed.

Applications & Real-World Impact

Where pragmatic analysis quietly powers products people use every day

Conversational AI

Voice assistants and chatbots resolve indirect requests and track intent across turns.

Machine Translation

Preserves speaker intent, tone, and formality — not just word-for-word meaning.

Sentiment Analysis

Catches sarcasm, irony, and understatement that literal parsing misses.

Question Answering

Matches the real information need behind a query, not just its surface form.

Summarization

Retains what a speaker emphasized or implied, not only stated facts.

Content Moderation

Flags implied threats or harassment that keyword filters alone miss.

Conclusion

The final, most context-dependent stage

Pragmatic analysis decides what an NLP system does with meaning, not just what it computes from words and grammar.

Resolves what earlier stages cannot

Speech acts, reference, implicature, sarcasm, and world knowledge all require context beyond the sentence itself.

The difference between parsing and understanding

It's what lets a system respond to what a user means — powering chatbots, translation, search, and moderation.

“The measure of a truly intelligent NLP system isn't whether it can parse a sentence — it's whether it understands what the speaker meant.”
